Work From Home

Teemex is a cloud based web software that can be accessed from any location with internet connectivity, including mobile devices. It is hosted on Amazon Web Services and deploys Oracle technology.

Reduce Costs

Teemex is a fully managed software service with maintenance and support option. We manage the complexity of technology and give your staff more time to build the business. Costs incurred for in-house server infrastructure upgrades and maintenance will be redundant .

Customer Webshop portal enables direct entry of orders by customers. Reduces need for a bloated call centre and manual order taking.

Virtual warehousing enables direct goods delivery to customers. Saves warehouse space and transport fleet maintenance.

Overall productivity increase enables expansion of business without spending on additional resources.

Increase Sales

Efficient ordering, purchasing and delivery of goods on time make happy customers. Happy customers bring more orders.

Field sales staff will have online access to availability of stocks and order history of a customer, enabling immediate order taking on the go.

Related items in the Webshop creates opportunity for cross sales.

Acquire New Customers

Businesses are looking for technology solutions to place orders and track them for accuracy and efficiency. Customer Webshop portal is such a solution that will entice a new generation of customers.

Improve Cash Flow

Invoices are auto-generated on confirmation of delivery and emailed to customers within the same day.

Part delivered sales orders can be part invoiced for early payment collection.

Outstanding invoice tracking enables quick follow up leading to early collection.
